

Marketing Funnel

Marketing campaign performance across the funnel- KPIs for leads, response rate, spend, and revenue; channel and funnel stage breakdowns; campaign spend vs revenue combo ch...

Total Marketing Leads Generated

Distinct lead count across all campaigns

2.24K

Average Campaign Response Rate

Percentage of leads responding to marketing outreach

0.27

Total Campaign Spend

Cumulative marketing investment across all campaigns

\$12.36M

Total Revenue Attributed

Sum of revenue generated from marketing campaigns

\$1.13M

Lead Count by Campaign Channel

Marketing channels ranked by total leads generated

Closed-Won Rate by Marketing Channel

Lead conversion effectiveness across campaign channels

Lead Count by Funnel Stage

Lead volume distribution across marketing funnel stages

Campaign Spend vs Attributed Revenue

Total spend as bars with revenue trend line by campaign

CHANNEL MIX IS UPSIDE DOWN. FINDING: Direct Mail converts 49.0% of its 149 leads to Closed Won; Organic Search converts 0.9% of its 671 - a 54x gap - yet Direct Mail gets only 6.7% of all leads. Organic Search and Email together burn \$2.03M for 14 closed-won leads. WHY IT MATTERS: over half our lead volume runs through the two channels that almost never convert, inflating lead counts while starving pipeline. ACTION: shift Organic Search and Email budget into Direct Mail and Partner Referral for one quarter, then re-measure closed-won rate by channel. CAVEAT: \$12.36M recorded spend against \$707K booked in CRM means spend is allocated per touchpoint - use these figures to rank campaigns, not as absolute ROI.

Sales Pipeline

Sales pipeline health- KPIs for total deal value, win rate, avg deal value, avg days to close; product-region-stage-loss breakdowns; monthly deal value trend.

Total Deal Value

Sum of all pipeline deal values in currency

707.2K

Overall Deal Win Rate

Percentage of opportunities successfully closed as won

0.63

Average Deal Value

Mean deal value across all sales opportunities

1.42K

Average Days to Close Deals

Mean sales cycle length across all opportunities

66.76

Total Deal Value by Product

Product lineup ranked by cumulative deal value

Win Rate by Sales Region

Regional comparison of deal conversion success rates

Deal Count by Pipeline Stage

Opportunity distribution across sales funnel stages

Deal Count by Loss Reason

Ranking lost opportunities across rejection categories

Monthly Total Deal Value Trend

Sum of closed deal values across months

REGIONAL WIN-RATE GAP AND LOSABLE LOSSES. FINDING: Central closes 69.9% of its deals (144 of 206) while East closes 57.8% (74 of 128) - a 12.1-point spread, the widest in the pipeline. Separately, 46.7% of our 184 losses are No Decision Made (43) or Poor Product Fit (43); competitors account for only 18.5%. WHY IT MATTERS: closing East's 128 deals at Central's rate wins about 15 more deals - roughly \$38,600 more booked revenue at East's \$2,496 average won deal, with no extra lead spend. We lose more to stalled decisions and poor qualification than to rivals, and both are controllable earlier. ACTION: have Central's managers coach East on qualification and discovery, and add a gate before proposal requiring a named budget holder and confirmed fit.

AT-RISK ACCOUNTS. FINDING: YieldMax Software is both our highest-revenue account (\$40,722) and our heaviest support burden, filing 334 tickets - 11.1% of all 3,000. Across 85 accounts revenue and ticket volume correlate at 0.57. Falcon Software, HavenCrest Communications and NorthStar Finance each pair above-median revenue and ticket volume with negative sentiment on 31-55% of their tickets: \$42,040, or 5.9% of booked revenue, at elevated risk. WHY IT MATTERS: support load rises with account value, so the accounts costing most to serve are the ones we can least afford to lose. ACTION: assign named technical account managers to these three plus YieldMax and review monthly; treat any account above 30% negative sentiment as a renewal risk.
